Appropriate engineering controls

Engineering measures to reduce exposure:

Ensure adequate ventilation. Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Individual protection measures, such as personal protective equipment

Personal Protective Equipment

Eye protection: Safety glasses with side-shields.

Skin and body protection: Chemical resistant apron
Gloves
Long sleeved clothing

Respiratory protection: Effective dust mask. Use a dust respirator under conditions where exposure to the substance is apparent (e.g. generation of high concentration of dust (dust clouds) , inadequate ventilation, development of respiratory tract irritation), and engineering controls are not feasible. Be sure to use an approved/certified respirator or equivalent.

Hygiene measures: Avoid contact with skin, eyes and clothing. Wash hands before breaks and immediately after handling the product. When using, do not eat, drink or smoke.

Symptoms

Skin Contact: May cause skin irritation.

Eye Contact: May cause eye irritation.

Inhalation May cause irritation of respiratory tract.

Ingestion Low hazard for usual industrial handling. Magnesium salts are absorbed very slowly from the gastrointestinal tract, and normally can be tolerated orally in fairly large amounts with no significant accumulation of magnesium, except in individuals with kidney dysfunction. Symptoms reported from magnesium chloride overdose include diarrhea, loss of appetite, hypotension, cardiac arrhythmias, respiratory depression, neuromuscular impairment, effects on behavior/central nervous system (depression, somnolence, excitement), loss of reflexes, and death in respiratory arrest.

Aspiration hazard No information available.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Chronic Toxicity Prolonged or repeated ingestion may have an effect on spleen, pancreas (hypoglycemia), liver, the kidneys, and effects on calcium and potassium levels in the blood based on animal data. Note: If used under conditions generating fumes, there is a risk of developing metal fume fever (a flu-like condition) if the fumes are inhaled. Symptoms of metal fume fever are chills, fever, labored breathing, and

aches and pains which generally develop within a few hours after exposure, and subsides within 24 to 48 hours.
